LAB EXPERIMENT

11. Perform a 180-degree rotation clockwise along the y-axis for the given image

Code:

```
import cv2

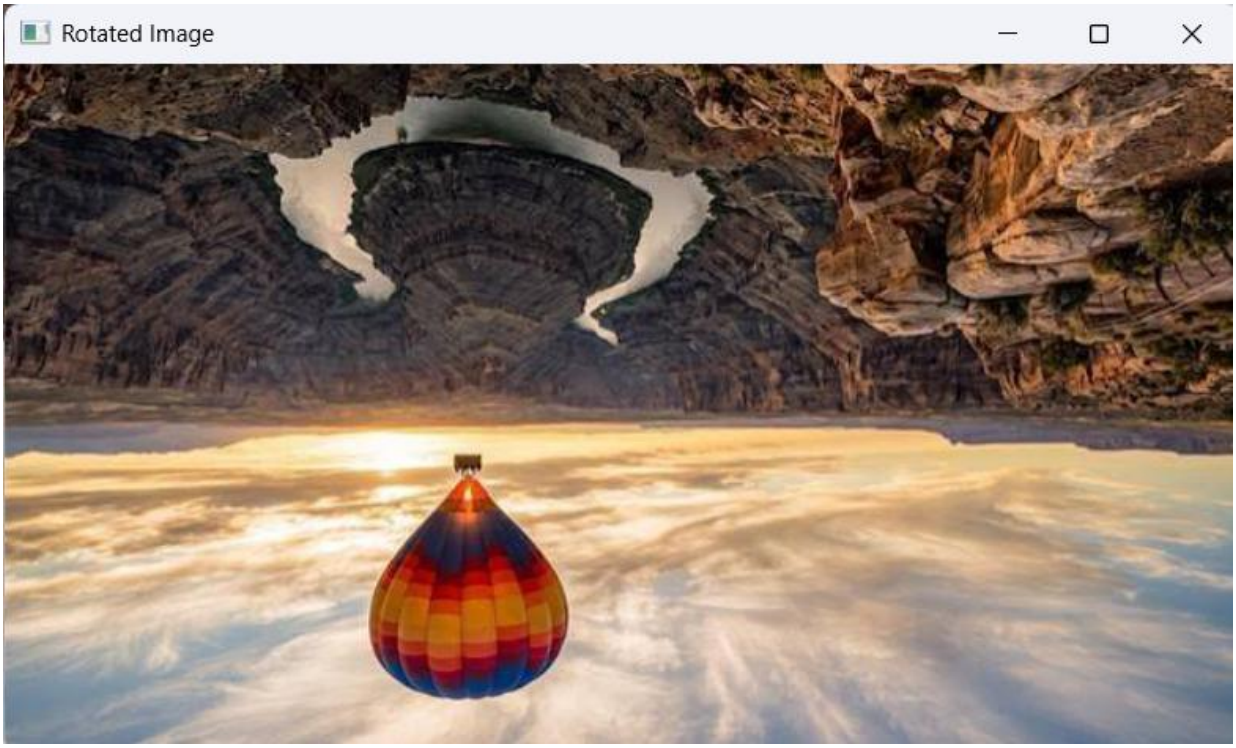

# Read the image
img = cv2.imread(r"C:\Users\Admin\Downloads\images.jpg")

if img is None:
    print("Error: Image not found!")
else:
    # Rotate the image 180 degrees
    rotated = cv2.rotate(img, cv2.ROTATE_180)

    # Display the original and rotated images
    cv2.imshow("Original Image", img)
    cv2.imshow("Rotated Image", rotated)

    cv2.waitKey(0)
    cv2.destroyAllWindows()
```
