## LAB EXPERIMENT

## 15. Perform basic Image Handling and processing operations on the image is to read an image in python and detect the corners in the image using Harris Corner Detection function

**Code:**

```
import cv2
import numpy as np

# Read the image
img = cv2.imread(r"C:\Users\Admin\Downloads\images.jpg")

if img is None:
    print("Error: Image not found!")
else:
    # Convert image to grayscale
    gray = cv2.cvtColor(img, cv2.COLOR_BGR2GRAY)

    # Convert to float32
    gray = np.float32(gray)

    # Apply Harris Corner Detection
    corners = cv2.cornerHarris(gray, 2, 3, 0.04)

    # Mark detected corners in red
    img[corners > 0.01 * corners.max()] = [0, 0, 255]

    # Display the result
    cv2.imshow("Harris Corner Detection", img)

    cv2.waitKey(0)
```

cv2.destroyAllWindows()
