LAB EXPERIMENT

7. Perform basic video processing operations on the captured video. Read captured video in python and display the video, in slow motion and in fast motion.

Code:

```
import cv2

path = r"C:\Users\Admin\Downloads\video.mp4"

def play_video(delay, title):
    cap = cv2.VideoCapture(path)

    if not cap.isOpened():
        print("Video not found!")
        return

    while True:
        ret, frame = cap.read()

        if not ret:
            break

        cv2.imshow(title, frame)

        if cv2.waitKey(delay) & 0xFF == ord('q'):
            break

    cap.release()
    cv2.destroyAllWindows()

# Slow motion
play_video(100, "Slow Motion")

# Fast motion
play_video(1, "Fast Motion")
```

Fast Motion
5–second motion test video
Frame 57/120

Slow Motion
5–second motion test video
Frame 34/120
